

Marketing Agency & AI Governance Checklist

By Scott Farrell — LeverageAI · dental.leverageai.com.au/about

One page that pins down what your marketing agency can touch, who approves patient-facing claims, and what happens when AI writes your copy. Print it, fill it in with your agency, and keep it with your practice policies.

Marketing Agency & AI Governance Checklist

Prepared for Example Dental Clinic, Sydney · 15 Jun 2026 · part of your private Dental AI Blueprint. Review and adapt before adopting — general guidance, not legal advice.

*The agency governance page for **Example Dental Clinic** (practice name), covering _____ (agency / freelancer). Completed together on _____. Review yearly and whenever the agency or scope changes.*

How to use this: sit down with your agency (or send it to them), fill in every row, and have both sides sign. Anything you can't answer is not a gap in the form — it's a question for the agency. Keep it wherever your practice policies live.

Why this page matters

- **The practice carries the responsibility.** Advertising rules for regulated health services apply to what appears under your name — whoever wrote it, however it was generated. "The agency did it" is not a defence you want to test.
- **AI has changed agency output.** Drafts arrive faster, in greater volume, and sound confident — including wording that can trip advertising rules (testimonials, outcome promises, "best in..." claims). Volume makes the *approval step* matter more, not less.
- **Access is risk.** An agency that can edit your website, booking system or forms without sign-off can introduce a problem faster than you can spot it.

1. What the agency can touch

System	Access level (none / view / edit)	Can change WITHOUT owner approval?	Who revokes access when we part ways
Website	_____	yes / no	_____

System	Access level (none / view / edit)	Can change WITHOUT owner approval?	Who revokes access when we part ways
Booking system / online forms	_____	yes / no	_____
Google Business Profile	_____	yes / no	_____
Social accounts	_____	yes / no	_____
Ad accounts (Google/Meta)	_____	yes / no	_____
Tracking pixels / analytics	_____	yes / no	_____

Any row with edit access + "yes" is your highest-risk combination — decide deliberately, not by default.

2. Who approves patient-facing claims

Question	Answer
Who gives final approval before anything patient-facing is published?	_____
Are patient reviews / testimonials reused in marketing? (testimonials about clinical care are an advertising review trigger)	yes / no / unsure
Is before/after imagery used? Under what consent and context?	_____
Are superlatives ("best", "leading", "#1") and outcome promises ("guaranteed results") excluded?	yes / no / unsure
What happens when the practice says "take it down"? How fast?	_____

3. When AI writes the copy

Rule	Agreed?
AI-drafted content is always reviewed by a named human before publishing	yes / no
The reviewer checks specifically for advertising-rule triggers (testimonials, outcomes, superlatives, before/after)	yes / no
No patient information is ever entered into AI tools to generate marketing (including "anonymised" treatment stories)	yes / no
The practice is told which AI tools the agency uses on its behalf — and they're listed on the practice's AI tool register	yes / no

4. Evidence and review cadence

- **Keep the approvals.** A simple email trail ("approved — Scott, 12/6") is enough; the point is that approval *happened* and can be shown.
- **Quarterly skim:** open your own homepage, Google profile and latest posts as a patient would. Anything that reads like a testimonial, outcome promise or superlative goes on the review list.
- **Annual re-sign:** review this page with the agency once a year and whenever scope, staff or tools change.

Sign-off

	Name	Signature	Date
For the practice	_____	_____	_____
For the agency	_____	_____	_____

This is a general governance template for practice–agency workflows. It is not legal advice, and completing it does not establish compliance with AHPRA advertising requirements, the Privacy Act, the Australian Privacy Principles, or any other obligation. Items flagged here are review prompts, not findings. Adapt it to your practice and seek qualified advice for your circumstances.

Disclaimer: Educational guidance only, not legal advice. This guide is intended for practice workflow education. Do not enter patient-identifiable information into public AI tools.
